**Giampolini Site**  
**2847 Peralta Street, Oakland, California**  
**May 2006**

**Soil Cleanup Begins at Giampolini Site**  
**June 5 to August 14, 2006**

The Department of Toxic Substances Control (DTSC) is circulating this work notice to inform the community about upcoming work on the Giampolini Site located at 2847 Peralta Street in Oakland, California. Soil containing mineral spirits, benzene, polycyclic aromatic hydrocarbons, polychlorinated biphenyls (PCBs) and lead above the Site's residential cleanup goals will be excavated and moved to an offsite disposal facility. Oxygen-releasing compound will be applied to the groundwater to enhance the biodegradation of the mineral spirits and benzene. These cleanup activities are described in the Cleanup Plan approved by DTSC on May 25, 2006.

Beginning the week of June 5th, work will begin at the Site between 7:00 A.M. and 7:00 P.M. and continue Monday through Friday for up to ten weeks, weather permitting. The following work activities will happen:

- Workers will wear safety gear and operate various pieces of construction equipment.
- Approximately 2,688 cubic yards of soil will be dug up, stockpiled and tested to determine if it can be safely reused on site or removed to a licensed offsite disposal facility.
- Up to 170 trucks will be loaded, covered and shipped offsite periodically during this ten week period.
- Trucks will travel southwest on Peralta Street and then west on West Grand Avenue onto Highway 880.
- Soil samples will be collected after the soil is removed to verify that the site is safe for residential use. The excavations will then be backfilled.
- Oxygen-releasing compound will be applied to the base of excavations extending into the water table to treat residual levels of mineral spirits and benzene in the groundwater.
- Dust control measures will include watering affected areas and air monitoring at the Site.
